TOPIC(CASE STUDY)

Wholesale management system

OBJECTIVE

Wholesale system is the process of buying the stocks from the buyers and then selling it to the customers. It acts as a middle person between the buyers and the sellers. Management system ensures the proper dealing and security of the data of the shop

As the available existing system provides limited functions to the user, thus this project will contain enhanced and more flexible functions to the store. The objectives include:
1. Maintain the details of stock like their id, name, quantity.
2. Maintain the details of buyers from which the manager has to buy the stock like buyer id, name, address, stock id to be bought.
3. Details of customers i.e. name, address, id.
4. Defaulter's list of customers who have not paid their pending amount.
5. List of payments paid or pending.
6. The stock that is to buy if quantity goes less than a particular amount.
7. Profit calculation for a month.
8. Quantity cannot be sold to a customer if the required amount is not present in stock and the date of delivery should be maintained up to which stock can be provided.

TOOLS USED

MySQL,HTML,PHP,webserver hosted using XAMP
